over the past several decades american society has experienced fundamental changes from shifting relations between social groups and evolving language and behavior norms to the increasing value of a college degree these transformations have polarized the nation s political climate and ignited a perpetual culture war in a sequel to their award winning collaboration asymmetric politics grossmann and hopkins draw on an extensive variety of evidence to explore how these changes have affected both major parties they show that the democrats have become the home of highly educated citizens with progressive social views who prefer credentialed experts to make policy decisions while republicans have become the populist champions of white voters without college degrees who increasingly distrust teachers scientists journalists universities non profit organizations and even corporations the result of this new diploma divide between the parties is an increasingly complex world in which everything is about politics and politics is about everything

in privilege and anxiety hagen koo examines what has happened to the korean middle class in the era of neoliberal globalization and demonstrates that global economic change brought more profound changes than mere economic decline and shrinking size to this class globalization has inserted an axis of polarization into the middle class separating a small minority that benefits from the globalized economy from the large majority that suffers from it this internal differentiation generates a challenging dynamic within korean society as the newly affluent seek to distinguish themselves from the rest of the middle class to establish a new privileged class position privilege and anxiety explores how these tensions play out in three areas consumption and lifestyle residential differentiation and education in all three areas the dominant orientation of the affluent middle class is to preserve their newfound privilege and to pass it onto their children their new class practices koo argues bring great anxiety to both the winners and losers of neoliberal globalization

reaction diffusion and excitable media are amongst most intriguing substrates despite apparent simplicity of the physical processes involved the media exhibit a wide range of amazing patterns from target and spiral waves to travelling localisations and stationary breathing patterns these media are at the heart of most natural processes including morphogenesis of living beings geological formations nervous and muscular activity and socio economic developments this book explores a minimalist paradigm of studying reaction diffusion and excitable media using locally connected networks of finite state machines cellular automata and automata on proximity graphs cellular automata are marvellous objects per se because they show us how to generate and manage complexity using very simple rules of dynamical transitions when combined with the reaction diffusion paradigm the cellular automata become an essential user friendly tool for modelling natural systems and designing future and emergent computing architectures the book brings together hot topics of non linear sciences complexity and future and emergent computing it shows how to discover propagating localisation and perform computation with them in very simple two dimensional automaton models paradigms models and implementations presented in the book strengthen the theoretical foundations in the area for future and emergent computing and lay key stones towards physical embodied information processing systems
